[GitHub](#)

## SKILLS

JavaScript

TypeScript

React

Redux

Node.js

SQL

MongoDB

Git

CI/CD

## PROFILE

As a junior fullstack developer, I may not have commercial experience, but what I lack in years, I make up for in passion and determination. I have a natural talent for problem-solving and am constantly learning new technologies to enhance my skills. With a solid foundation in programming principles, I'm eager to take on new challenges and make my mark in the tech world.

## EDUCATION

Bachelor, Khmelnytsky National University

Khmelnytsky

Sep 2022 — Jun 2026

## PROJECTS

### Storyteller

Storyteller is a global network for authors to share stories, receive feedback, and connect with other writers. Using Node.js, React, Express, and MongoDB, I developed both the backend and frontend and added features like user authentication, story management, and commenting.

### Chess

Chess is a web chess client that allows users to play chess online with other players. The client is built with TypeScript, React, and OOP. I worked on the frontend development of the project, and implemented features such as game creation, move validation and timer.

### BloggerUP

BloggerUp is a Telegram bot that helps move up Instagram accounts. The bot provides users with targeted engagement and promotion to increase their followers and engagement. The bot is built with Node.js and Telegram API. I worked on the bot logic, implemented the promotion strategies, and integrated the bot with Instagram API.
